I have been serving on the board since mid-2023 and have become familiar with the processes, agreements, and concerns associated with CMWC. I have a Professional Engineering (PE) License in environmental engineering in the state of Utah Through my work experience I have worked with many Counties, Cities, and municipalities on a variety of projects including improvements to water infrastructure and have become familiar with how public institutions function. I am eager to see other improvements made at CMWC which include finalizing a development agreement with Mountain Green Tank and associates and to form a water district with secondary water. The benefits of a district include additional funding opportunities to make needed infrastructure improvements and the county manages the elections of board members through the clerks mail in ballot process.
